(54) Title: A METHOD AND A DEVICE FOR TRANSPORTING IDENTIFIED PACKAGING UNITS

(57) Abstract: A method and device for individually transporting articles of different type, size, weight, material or shape to one delivery location of a plurality of delivery locations that is designated for the respective article. The articles are placed one by one in respective transport containers, and the respective article is caused at a desired respective delivery location to be transferred from its transport container to a collecting or storage bin, distintegrator or further conveyor dedicated to the article, the transport container at the designated delivery location being made to discharge the article under the effect of gravity or with the aid of a separate, controlled actuating means. The respective article is identified prior to it being placed in a transport container. Identification may, for example, be related to the material of which the article is made.
